

Complete List of DSM-IV Codes

The following 2 tables give basic codes for all DSM-IV diagnoses. Note that the numbers are the least important part of the diagnoses: Additional verbiage, often not stated in the tables but given in the text, conveys the actual sense of the individual patient's diagnosis. And of course, there is a great deal concerning the interpretation of symptoms that I could not get onto these pages at all. For that, you will have to consult the book.

To save space, I (Dr. James Morrison) have abbreviated in two ways:

An asterisk (*) marks those locations where "Sedative" stands for "Sedative, Hypnotic and Anxiolytic"

In the mood disorders, the fifth digit is used to denote severity for Major Depressive, Manic, and

Mixed episodes: .01 = Mild; .02 = Moderate; .03 = Severe Without Psychotic Features;

.04 = Severe With Psychotic Features; .05 = In Partial Remission; .06 = In Full Remission;

.00 = Unspecified
